Profile

DevOps Engineer with **2+ years of experience** architecting **CI/CD pipelines** and infrastructure automation across **Windows and Linux** environments.

Designed and maintained **GitLab CI/CD pipelines** supporting a multi-language microservices platform, migrated and **refactored 90+ pipeline-as-code definitions in Harness** while provisioning **Harness Delegates** on **Kubernetes** using **Helm**.

Designed, maintained, and optimized **GitLab** and **Harness** pipelines using **Linux and Windows Runners/Delegates**, integrating **Nexus** and **JFrog Artifactory**, implementing enterprise-grade code signing via **WinRM**, and automating deployments for applications built in **.NET, C++, Java, PHP, Gradle, and Python**.

Built and maintained a large-scale **Ansible** automation framework comprising **100+ playbooks** for application deployments, database migrations, certificate management, service orchestration, and environment specific configuration using **Jinja** templating.

Experienced with **Terraform** for infrastructure provisioning and **HashiCorp Vault** for secrets management, including **Vault HA cluster deployment**, unsealing, and **HAProxy**-based high-availability configuration.

Skilled in **DevSecOps**, integrating **Endor Labs**, **SonarQube**, and **OWASP Dependency-Check** into CI/CD pipelines to enforce automated security, compliance, and code quality gates.

Additional experience includes **Windows Server administration (IIS, SSL, ARR Routing)**, **NGINX** reverse proxy and load balancing, **Jenkins** pipeline automation, and automation development using **Python, PowerShell, and Bash**, with cloud experience across **Azure, AWS, and GCP**.

Experience

Associate DevOps Engineer

ESQ Data Solutions 📍 **Noida (Apr 2025 – Present)**

- Spearheaded the migration from **GitLab CI/CD** to **Harness**, refactoring and implementing **90+ pipeline-as-code definitions** and reusable templates for **Maven, .NET, and security-scanning workflows**. Provisioned **Harness Delegates** on **Kubernetes** using **Helm** and integrated existing **Ansible** automation to ensure deployment continuity throughout the migration.
- Designed, implemented, and maintained **GitLab CI/CD** and **Harness** pipelines for **90+ applications and microservices** across **Java, .NET, C++, Gradle, PHP, and Python**, covering build automation, unit testing, enterprise code signing, staged deployments, artifact publishing, and release orchestration.
- Reduced deployment failures by **~60%** across **50+ applications and microservices** by stabilizing CI/CD pipelines, refining **Jinja2**-templated configurations, and implementing automated backup and rollback mechanisms.
- Designed and managed **Kubernetes** based **Helm Delegate** clusters supporting up to **200 pods**, enabling **Harness** to execute **Ansible playbooks** via **containerized runners**.
- Set up **RMM Agent** performance-testing environment, spinning up **100+ agent pods** for load and performance validation of RMM services.
- Implemented **DevSecOps** practices by integrating **SonarQube**, **OWASP Dependency-Check**, **Endor Labs** (SCA and reachability-based vulnerability analysis), **ScanCode**, and **CLOC** into CI/CD pipelines. Developed a custom **Bash** tool to publish **Endor Labs SARIF** results as **GitLab Merge Request** comments and built two standalone **CLOC** reporting solutions that generated **Excel pivot-table** code metrics.
- Designed and implemented an **ephemeral GitLab Runner** infrastructure on **Azure** using **Terraform**, dynamically provisioning VM-based runners for CI/CD jobs and automatically decommissioning them after execution, reducing idle infrastructure and eliminating the need for large always-on runner VMs.
- Developed a centralized **Harness Landing Page** to **manage project scopes, access permissions, environment separation, reusable template governance**, and template review workflows across **development** and **production environments**.
- Automated infrastructure provisioning using **Ansible**, developing and maintaining **120+ playbooks** with **Jinja2** templating and integrating them directly into **GitLab CI/CD** and **Harness** deployment workflows. Configured and administered self-hosted **GitLab Runners** and **Harness Delegates** across **Windows** and **Linux** environments to improve pipeline concurrency, caching, and execution efficiency.
- Integrated **HashiCorp Vault** into CI/CD pipelines for secure secrets, credentials, and certificate management. Managed artifact repositories across **Sonatype Nexus** and **JFrog Artifactory**, including cross-platform migration tooling, repository governance, version management, and controlled distribution of internal components.

- Administered **Windows Server** infrastructure, including **IIS**, **SSL/TLS certificate management**, and **Application Request Routing (ARR)**. Supported database schema migration workflows and provided **L2 support** for legacy CI/CD pipelines to ensure reliable and uninterrupted software releases.

DevOps Engineer

Tvid Service 📍, Greater Noida (Jul 2024 – Apr 2025)

- Deployed **Laravel (PHP) CMS** and **React websites** on **AWS EC2**, **GCP**, and **DigitalOcean**, with full **CI/CD pipeline** implementation, management, and troubleshooting.
- Designed and maintained **deployment pipelines** ensuring scalable and production-ready environments.
- Implemented **Blue-Green deployments**, achieving near-zero downtime and improved system stability.
- Automated workflows on **AWS** and **GCP** using **Jenkins**, reducing manual effort and accelerating release cycles.
- Built a **Python (Streamlit) + Docker web app** to automate **APK builds** (Android Mobile/TV, Roku), enabling **client-specific branding** and reducing build time.
- Automated **EC2 provisioning** with **Terraform + Python (Streamlit)** and streamlined deployment of **Laravel-based backends and CMS dashboards**, ensuring scalability and real-time operations.

Technical Skills

DevOps (CI/CD)

- **Build Automation:** Maven, Gradle, npm, Composer, .NET Core, .NET Framework
- **CI/CD Pipelines:** Harness, GitLab CI/CD, Jenkins
- **Infrastructure as Code:** Ansible (YAML), Terraform

Artifact & Package Management

- Sonatype Nexus, JFrog Artifactory (artifact repositories, dependency management, cross-platform migration)

Containerization & Orchestration

- Docker (containerization)
- Kubernetes (deployment, scaling, Helm charts)

Networking, Proxies & Load Balancing

- NGINX, Apache, HAProxy
- IIS (ARR rules, reverse proxy configuration)

Secrets & Security

- HashiCorp Vault (secure secret storage and dynamic credentials)

Collaboration Tools

- Git, GitHub, GitLab
- VS Code, Postman, Jira
- Jupyter Notebook, Google Colab

DevSecOps & Code Quality Integration

- SonarQube (quality gates, PR/MR analysis)
- OWASP Dependency-Check (vulnerability scanning)
- Endor Labs (reachability-based risk analysis, SARIF reporting)
- ScanCode (open-source license scanning)
- CLOC (codebase metrics & reporting)
- Integrated SAST, SCA, and license compliance checks into CI/CD pipelines

Programming & Scripting Languages

- Python, Bash, Shell Scripting, PowerShell

Infrastructure & Runners/Delegates

- **Servers:** Linux (Ubuntu, Debian Server administration), Windows Server (IIS configuration, SSL, certificate management)
- **GitLab Runners:** Linux, Windows
- **Harness Delegates:** Linux, Windows, Helm

Cloud Platforms & Services

- Google Cloud Platform (GCP)
- Amazon Web Services (AWS)
- Microsoft Azure

Databases

- MySQL, Microsoft SQL Server (MSSQL), Liquibase (schema migrations), phpMyAdmin

Education

United College of Engineering and Research
Bachelor of Technology in Computer Science and Engineering
PERCENTAGE: 74%

December 2020 – July 2024 | Prayagraj, India

Extracurricular

- **NSS Volunteer** – 2 years of service in community development and social initiatives
